PROFESSIONAL SUMMARY

Computer Science sophomore at Misr International University with hands-on frontend development experience at Code Alpha. Proficient in Java, C++, Python, and web technologies, with a solid foundation in OOP, data structures, and algorithms. Currently deepening expertise in Python, SQL, and data analysis, with a focus on transitioning into Data Science Engineering.

EXPERIENCE

Code Alpha | *Frontend Developer Intern*

Dec 2025 – Jan 2026

- Built 4+ responsive landing pages by translating UI/UX wireframes into interactive interfaces using HTML, CSS, and JavaScript, improving mobile usability across major screen sizes.

Tickets Marche | *Event Coordinator (Freelance)*

2022 – 2025

- Coordinated on-ground operations for 10+ live events, managing attendee flow and venue logistics for crowds of 500+ attendees.
- Monitored ticket scanning systems across multiple entry points, coordinating with the technical team to minimize gate disruptions during live events.
- Contributed to post-event reporting by documenting operational issues, attendee feedback, and improvement recommendations across 3 years of events.

EDUCATION

Misr International University | *Bachelor of Computer Science*

2024 – Present

Modern Language School | *Thanawia Amma — Science Section*

Graduated 2024

ACADEMIC PROJECTS

E-Commerce Website | *HTML, CSS, JavaScript, Node.js, MongoDB*

Built a full-stack e-commerce web application with responsive frontend and backend integration. Implemented product listings, cart functionality, and basic user authentication.

Computer Networks Enterprise Project | *Cisco Packet Tracer (MIU)*

Designed and implemented a multi-site enterprise network simulating a real organizational infrastructure. The project included VLAN segmentation, inter-VLAN routing, OSPF and EIGRP routing protocols with redistribution, DHCP services, NAT (static & PAT), and site-to-site IPsec VPN configuration. Additional services included DNS, Web, Email, NTP, Syslog, and wireless network setup. The network was fully tested for end-to-end connectivity and documented for deployment and troubleshooting.

Recruitment Management System | *Java*

Designed and implemented a Java-based recruitment system using OOP principles, with role-based logic and data handling to manage candidates and recruitment workflows.

Graph Traversal Engine | *C++*

Built a graph traversal engine implementing BFS and DFS with adjacency matrices, analyzing time complexity and traversal efficiency for different graph sizes.

MIU GPA Calculator | *C++*

Developed a GPA calculator to compute student GPA based on course credits and grades, applying conditional logic, loops, and input validation.

SKILLS

Languages: Arabic (Mother tongue), English (Professional Working Proficiency)

Programming: Java, C++, Python

Web Development: HTML, CSS, JavaScript, Node.js

Concepts: OOP, Data Structures & Algorithms, Problem Solving

Database: SQL, Database Design **Tools:** Cisco Packet Tracer, Git, GitHub

Networking: IP addressing, subnetting, VLANs, OSPF, EIGRP, NAT, DHCP, IPsec VPN, routing
